Corporate Profile

Company Detail

Company Name:	Impact Protective Solutions Pty Ltd
Business Address:	32 Weston Street, Naval Base, WA 6165
Contact Numbers:	+61 429 902 208
Organisational Data:	ACN 631 658 565
	ABN 19 631 658 565

Public & Products Liability

Insurer:	Berkley Insurance Australia
Policy Number:	201905-0697 R3 BIA
Limit of Liability:	$20,000,000

Workers Compensation

Insurer:	GIO
Policy Number:	WCW004965881.

Business Insurance

Insurer:	Zurich
Policy Number:	353834PZBI

Our Mission.

We get your job done right without the headache. Our no-nonsense Wear Protection solutions deliver the mining industry reduced costs, increased efficiencies resulting in longer product life and less time in shutdown.

Our Vision.

Our VISION, quite simply, is to make an impact. We build value for your company by maximising the lifetime of your assets. To do this, we deliver market leading work, backed by strong values, a clever, knowledgeable perspective and error free work.

Our Story

We set out to make an impact

Keeping your equipment running smoothly means you need the best lining installed and the team to do it properly. With productivity on the line, why risk the absence of specialisation and care? Wear protection solutions should not be thought of as mere add-ons (done by anyone with two legs and a heartbeat). By chasing cheap it only costs you more in the long run.

We set out to make an impact. For too long we've seen deficiencies in product, work and value across our industry.

It **can** be done better, and we're doing it.

Impact's work looks good and works well. You'll have access to high quality trades who rock up and do high quality work - no cutting corners. You'll increase your product lifecycle and reliability - saving you time and money in the long run. You'll receive a specialised approach that provides greater ROI, less downtime and better total cost of ownership.

We get the job done right; how good is that?

Why us?

Take the headache away

We are here to make life easier for you. Rubber lining, ceramic coating and surface treatments can make or break the quality of your piping. But let's face it, it's not something you want to have to think about. So when it wears out or doesn't go the distance because the product lacks quality or hasn't been installed by a pro, you can be left feeling short changed and under the pump to get it fixed (and fixed well).

This is where we come in. We take your headache away by delivering a good product and good service in a straightforward way.

As people who live and breathe Wear Protection Solutions, we see the finer details are key to getting your job done well. This means, when we make, it's well fabricated. When we paint, there are no runs. When we install, everything looks smooth with a nice finish. And it's always backed up with reports and inspection test plans for your piece of mind. This is what good work looks like to us and what will ensure your total cost of ownership provides good return on investment.

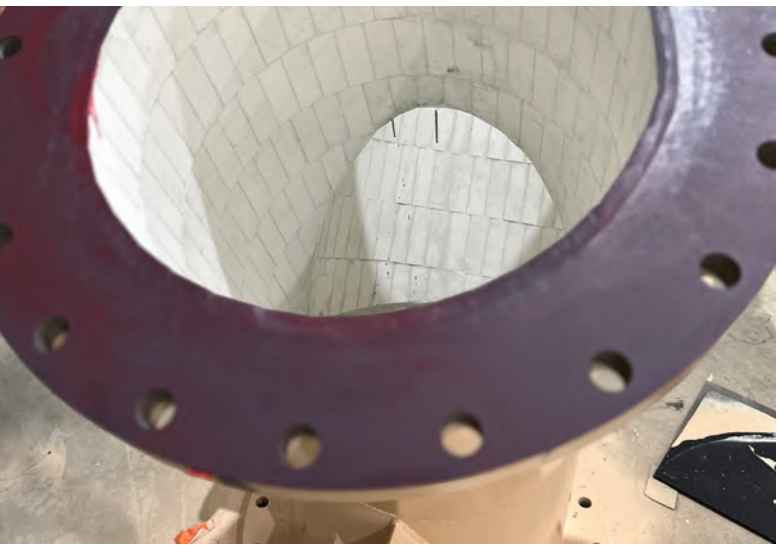

What We Do

Rubber Linings

Done right to go the distance

Our customised, hand-crafted rubber lining services are the key to avoiding premature wear caused by shock, abrasion and corrosion. We believe it's the 1%'s that make all the difference. We treat every project like it's our own and go above and beyond to do those little extra elements that further enhance wear protection. Our highly experienced team optimise both new and old equipment, either stripping out old rubber and relining or applying rubber lining for the first time.

Ceramic Linings

Take a hard stance against premature wear

Our specialised ceramic linings are highly abrasion and corrosion resistant. They are designed to withstand the high flow rates and small particle impacts of dry and liquid materials, even at high temperatures. From our custom facility in Naval Base, WA, we apply ceramic linings to brand new equipment, and study the wear patterns from used ceramic linings to better understand how materials flow through the equipment giving you the resources and experience to deliver the perfect wear lining solution.

Polyurethane Lining

A powerhouse performer in wear protection

Polyurethane lining provides a strong form of defence against abrasions and impacts, usually caused by the movement of materials through an asset. This high level of protection means equipment stays operational for longer, boosting efficiency and productivity. And with the hardness of a ceramic lining and many of the positive traits of rubber lining, including being resistant to corrosion, reducing noise and not tearing easily, it's easy to see why this "Poly" is attracting a lot of interest.

Fabrication

Design and fabrication from start to finish

Fabricating in-house means we can solve virtually all wear protection problems from ground zero by fabricating, lining and painting a wide range of equipment such as pipe shoots, boxes, tanks and vessels using our accrued a wealth of insights and knowledge adding value to every project. Our specialist team fabricate a variety of vessels and a large selection of process and storage tanks. And our process piping is relied upon within the mining, oil, gas, fertiliser, refinery and petrochemical industries.

Surface Treatments

Professional sandblasting & protective painting

From thorough abrasive blasting through to high-tech protective painting, our surface treatment capabilities provide you with professional 'start to finish' wear protection service for clients across Australia. Operated by an experienced team, our large on-site booth delivers fit for purpose sandblasting and painting/protective coating services using single component enamels, polyurethanes and two pack epoxies. And our mobile sandblasting booth enables our team to carry out vital sandblasting work to a high standard at sites across WA.

Shutdowns

Done right to go the distance

Our comprehensive shutdown solutions make a big impact on site reliability and productivity. From fixed shutdowns to site processing, we take the headaches out of shutdowns by taking care of the lot: Labour, Supervision, Tooling, Materials, Consumables and Mobile sandblasting equipment (if required). We're equipped to work seamlessly within your schedule, from four-day shutdowns to those extended downtimes that last a fortnight. And making an impact doesn't stop there. We'll provide completion reports and proactively identify opportunities for improvement.

Wear Liner Supply

Durable solutions for a range of applications

We've seen first-hand the differences in quality across the wear lining sector, and how superior solutions can leave a lasting impact on productivity and profitability. Our highly resilient wear liner products absorb impacts (primary and secondary), reduce vibrations and resist fire. We stock a range of wear liner products to accommodate a wide assortment of applications including chutes, bins, launders and hoppers. We supply only proven and tested liner solutions in 30, 40, 50, 60, 80, 100 and 120mm thicknesses. Liner dimensions can be customised on request.
